

## LIFTek Crane Products

LIFTek was founded in 1996 with the purpose of providing a cost effective fail-safe wireless anti-two block alarm system for mobile cranes that would satisfy the stringent requirements of OEM's. Since that time, LIFTek wireless systems have been used by major OEM's like USTC, Manitowoc Boom Trucks, Manitex, National Crane, Terex and others. LIFTek systems have set the standard in terms of battery life, ease of use, ruggedness and over-all value.

We take pride in our proven track record of "on time" deliveries, quality products and exceptional service to both OEM and aftermarket clients worldwide. We provide free telephone support, same day shipping and same day repair service for our standard crane products. We look forward to working with you in selecting a standard product or in developing a system that meets your special requirements.
